GO TO: WWW.PA.NESINC.COM

This is the place to go to:
- Find out which tests (PAPA and PECT) are appropriate for your certification area
- Register for any and all PAPA and PECT tests
- Find preparation materials
- Discover testing rules and policies.

Please take the time to explore this site...it contains a lot of extremely helpful information!

NOTE: In order to do well on any certification assessment, it is very important to prepare well ahead of time. Please use the resources available so that you know everything you can about the test prior to taking it.

Being knowledgeable about how the test will look and the structure of the questions/test should lessen the amount of stress you may encounter on test day.

We urge you to take the time to become well-prepared!
LOCATING PREPARATION MATERIALS

Click on the link ‘Find prep materials for your test’ to find all preparation materials for your required assessments.
Once you click ‘Find prep materials…’, you will come to the screen shown on the left. From here, use the drop-down arrow to select the appropriate test.

You will be able to choose:
- PAPA
- PreK-4
- Special Education PreK-8
- Special Education 7-12

**NOTE:** The PECT series are for all PreK-4 and Special Education (both PreK-8 and 7-12) certification candidates. If you are wanting any other certification area (Secondary, Middle Level (4-8), Music, Foreign Language, etc.), you will need to find the appropriate Praxis II test(s) and preparation materials through ETS (www.ets.org).

All undergraduates (this does not depend on certification area) must take the PAPA modules. Information about this assessment is found here on Pearson’s website.
After you have selected a specific test, you will come to the “Preparation Materials” page.

I have chosen the PAPA test as an example, but the page and links will look similar to that on the left no matter which test you select.

Here, you will be able to choose from the following:

- **Test-taking strategies**
- **Test design and objectives** (what you will be tested on and how it will be tested)
- **Sample questions** (to give you a sense of the types of questions and language used on the test)
- **Resources** – if you know you need help with a particular topic being assessed, one of the listed resources could be helpful
- **Computer-Based Testing Tutorials** – see what the computer-based test screen will look like on test day
- **Full-length practice test** – with answers, this is helpful to test your knowledge ahead of time and to see the structure and type of content on the test

**NOTE:** In addition to using the materials posted on the Pearson website, the Curriculum Lab (McInnis Hall, St. Davids campus) has numerous books and materials which could be useful in preparing for specific test objectives which you feel you may need extra preparation for in order to do well.
